

Using NCCI's **Riskworkstation™** Tool to Access Risk-Specific Information

Last year, more than 2 million underwriters and agents accessed **Riskworkstation™**, utilizing its features more than 10 million times. Are your underwriters and agents taking advantage of this essential tool?

Get Risk-Specific Information

Riskworkstation simplifies the underwriting process by providing everything you need in one place:

- **Mods/Worksheets**—Order the mod factor for quick reference or the worksheet for a more detailed look
- **RiskSnapshot® Report**—Analyze up to 10 years of mod information in one convenient report
- **Risk History Report**—Review five years of payroll and claims by state and class code—a great report for both rated and non-rated risks
- **Research Tools**—A.M. Best and International Risk Management Institute (IRMI) partnerships put valuable tools at your fingertips right in **Riskworkstation**

“My time is valuable and **Riskworkstation** allows me to gather information in an instant!”—**Riskworkstation User**

“It gives me information that I can't find anywhere else. It makes me sound smart.”—**Riskworkstation User**

Try Out a Test Mod

The **Test Mod** tool within **Riskworkstation** allows users to try out hypothetical what-if scenarios. What will the effect on a mod be if:

- Claims drop off of next year's worksheet?
- A safety program is reevaluated?
- A merger or acquisition takes place?

“Customers tell us that one of the most useful features of **Riskworkstation** is **Test Mod**,” says Lisa Jarnot, director of product management at NCCI. “It's a great asset and saves a lot of time.”

Learn More at ncci.com

Check out the Learning Center on ncci.com for two webinars that explain the key features and benefits of **Riskworkstation** and its **Test Mod** function. Both are available free of charge and each can be viewed in 20 minutes or less.
