

# Industry Drill Down:

## Leisure and Hospitality, Office, Education, and Health Care Industries

While overall claim frequency has been in a decades-long decline, at an industry level, trends can be very different.

### Leisure and Hospitality

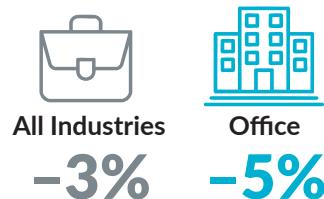

**Restaurants<sup>1</sup> make up more than 50% of the Leisure and Hospitality industry.**

Given the tasks involved with food prep, burn and cut claims are more common, but also less severe than in other industries.

		Burns		Cuts	
		Restaurants	All Other Industries	Restaurants	All Other Industries
2023 Average Total Severity (\$000)		\$19	\$66	\$12	\$28
2023 Claim Share		11%	2%	10%	4%

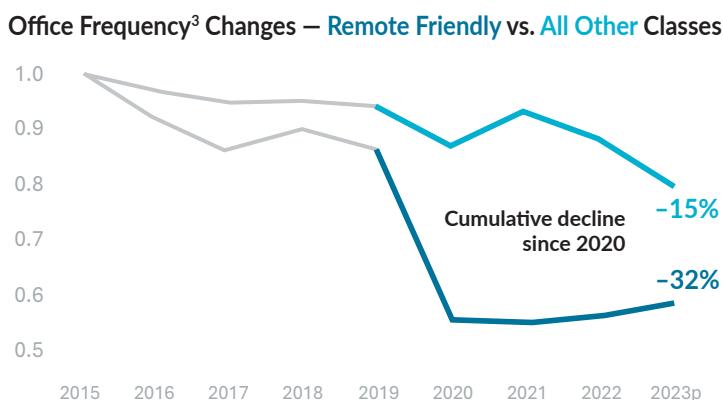

### Office<sup>2</sup>

Since 2020, average change in claim frequency for clerical-based office sectors declined more than the all-industry average.

**Today 20–30% of US workers work remotely.**

Office sectors have a greater % overall.

### Education

Private Education claim frequency has been increasing aside from a large drop due to the pandemic.

#### Struck/Injured by Claims

(includes kicks, bites, and hits)

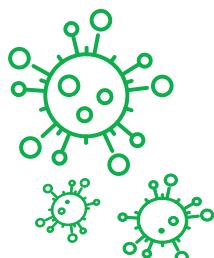

account for about **1 in 5** claims and its increasing frequency may indicate a rise in workplace violence within Private Education.

#### Education Frequency<sup>3</sup> Changes by Cause of Injury

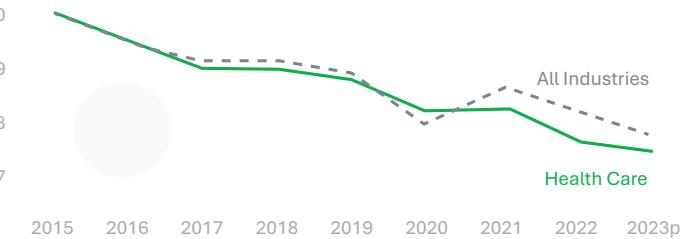

### Health Care

**COVID caused churn in the labor force**, which often drives increases in claim frequency.

**However, Health Care frequency has generally declined.**

#### Health Care Frequency<sup>3</sup> Changes
